

Product Roadmap: FY2026

Strategic Themes

FY2026 is organized around three themes: (1) deepening enterprise readiness with SSO, audit logging, and role-based access control; (2) expanding the integrations ecosystem, starting with Slack and Salesforce; and (3) improving platform performance, targeting a 40% reduction in average API response time by year end.

Release Timeline

Quarter	Release	Key Features	Status
Q1 2026	v4.2	SSO (SAML), audit log export	Shipped
Q2 2026	v4.3	Slack integration, role-based access control	In Progress
Q3 2026	v4.4	Salesforce integration, bulk data import	Planned
Q4 2026	v5.0	Performance overhaul, new analytics dashboard	Planned

Deprioritized for FY2026

Native mobile apps (iOS/Android) and a public plugin marketplace were evaluated but deprioritized for FY2026 due to limited engineering capacity; both are candidates for the FY2027 roadmap pending customer demand validation.

Success Metrics

The roadmap will be considered successful if, by end of Q4 2026: average API response time drops from 480ms to 290ms or lower, at least 25% of enterprise customers have enabled SSO, and the Slack and Salesforce integrations combined reach 500 active installations.
